

➔Identify and Remove Suspicious Browser Extensions

Date: 07-06-2025

Browser: Google Chrome

1. Extensions I Checked

I had 7 extensions installed on my browser.

2. Suspicious Extensions I Found

Extension Name	Why Suspicious	Permissions
Fake AdBlocker Plus	Unknown developer, bad reviews, looks fake	Access to all sites, read browsing data
CouponSaver Pro	I don't use it much, asks for data access	Access to data on shopping sites
Video Downloader X	Permissions too much, low ratings	Read and change data on all sites

3. What I Did

- Removed **Fake AdBlocker Plus** because it had bad reviews and asked for too much permission.
- Removed **Video Downloader X** because it looked risky.
- Disabled **CouponSaver Pro** for now since I don't use it often and want to check more later.

4. After Restart

- I restarted my browser after removing the extensions.
- Browser started faster and worked smoother.
- No weird pop-ups or ads appeared after removal.

5. What I Learned About Malicious Extensions

- They can steal personal info like passwords and browsing data.
- Some add unwanted ads or redirect you to dangerous websites.
- They track what you do online and can slow down your browser.
- It's important to check extensions regularly and remove the suspicious ones.

If you want, I can help you write it about your real extensions too! Just tell me what you have installed.

Fake AdBlocker Plus

Unknown developer, many negative reviews,
fake claims

Access to all websites, Read browsing data
